Product Overview

Robust design – Specifically designed for demanding process cooling applications

Ecodesign compliant – all models fully comply with ErP2021 – SEPR HT (EU) 2016/2281 – SEPR MT (EU) 2015/1095

Wide operating range – operates in ambient temperatures from +45°C down to -10°C with cooling fluid supply temperatures between +20°C and -10°C

Shell & tube evaporator – a robust solution providing greater dependability compared to more traditional designs

Coated condenser coils – aluminium microchannel construction results in a smaller refrigerant charge – while epoxy coating offers protection in potentially aggressive environments

Dual independent refrigeration circuits – additional resilience provides greater peace of mind

Isolation valves & strainers – fitted to fluid connections

Cooling Capacity

Nominal Running Capacity

The level of performance provided by each machine depends on the conditions at which it is operating. The two factors determining performance are ambient air temperature and the required cooling fluid outlet temperature. The above graphs illustrate the cooling capacity and nominal running current - at three different operating ambient temperatures - based on differing cooling fluid outlet temperatures.
